EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Regarding independent claims 1, 13, 22, 34, 43, 55, 64, and 76, the prior art of record does not disclose or suggest flushing (or purging) a buffer upon detecting a barge-in event (or a barge-in sound). *Wildfeuer, Chapman et al., and Smyth et al.* disclose that it is known to utilize a jitter buffer for receiving audio packets. Particularly, *Wildfeuer* discloses flushing voice packets in a frame delay buffer 66 upon detection of a DTMF signal for transmission to reduce packet transmission delay of in-band signals. (Column 7, Lines 12 to 22; Figure 7, Step 218) However, *Wildfeuer* flushes a frame delay buffer 66 for transmitting packets instead of jitter buffer 32 for receiving packets, and does not disclose barge-in. *White et al.* teaches a distributed voice user interface having barge-in components 38 and 66. (Column 11, Line 65 to Column 12, Line 13; Column 15, Lines 27 to 52) However, *White et al.* does not say anything about flushing a buffer upon barge-in. Normally, those skilled in the art would expect barge-in to cease playing a prompt, but not necessarily flush a buffer. Applicant's Specification, Pages 1 to 3, suggests an advantage of improving response time to barge-in for distributed speech systems. The prior art does not suggest the combination of flushing (or purging) a buffer upon detecting a barge-in event (or a barge-in sound) in order to improve response time for distributed speech systems.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
